

(A) Fixed-point geometry: $\beta J < 4$ vs $\beta J > 4$

Fixed points satisfy $m = F(m;P)$.

● $\beta J < 4$ ● $\beta J > 4$ ● Stable fixed point □ Unstable fixed point

(B) Bifurcation diagram $m^*(P)$ ($\beta J > 4$)

Grey band: bistable window. Dashed: unstable equilibrium.

— Stable equilibrium - - Unstable equilibrium
